

AGRIBUSINESS CHEMICALS

A number of GFS Chemicals products have been shown to be useful in agribusiness applications. GFS Chemicals products have been used as building blocks and intermediates for the manufacture of pesticides and insecticides.

This technology includes:

- Functionalized amines
- Liquid ammonia/alkali metal capability
- Internal & Terminal Alkynes
- Unsaturated alcohols, acids, ketones and aldehydes
- TMS, THP, BOC protected compounds
- Conjugated and non-conjugated ene-yne derivatives

GFS manufactures a variety of products for the agri-business industry (including but not limited to):

- 2-Butyn-1-ol
- 7-bromo-1-heptene
- BOC-Propargylamine
- 3-Buten-1-ol
- 4-Penten-1-ol
- 2,2'-Bipyridine
- 1-Bromo-2-butyne
- 3-Butyn-1-ol
- 1-Heptyne
- 1-Amino-5-hexene
- 5-Hexynoic acid
- 2-Bromopropene
- Cis-2-Buten-1-ol
- 5-Hexyn-1-ol

GFS understands the demanding needs of the Agribusiness industry. Our diverse product line focuses on the core building blocks for pesticide, herbicide, fungicide and pheromone products. Our technical staff constantly monitors the quality of our products using the most current methods and instrumentation. We have a proven track record of product development through the commercialization process. Our hands on staff of chemists are available to solve technical problems and to work with you to develop new and improved products. Contact us with your specific requirements or to learn more about our capabilities.
